AUTHOR INDEX — Volume 126

BARRYTE, S. E., needle points and spread functions, 124
BAUSMAN, M. D., alignment system for large high-power pulsed CO_2 laser fusion systems, 23
BENNETT, VIC, aspheric generation by sputtering techniques, 76
BERNAL G, E., interactive video image digitizer—application to interferogram analysis, 143
BOESE, R. W., Pioneer-Venus large probe infrared radiometer (LIR) optical system, 95
BROWN, F. GERALD, Pioneer-Venus large probe infrared radiometer (LIR) optical system, 95
BUCHROEDER, R. A., Hunt aberration generator, 67
CALKINS, JOSEPH L., specular illuminating arrangement for holographically stress-testing corneal wounds in post-operative patients, 8
CAMBIER, JAMES L., imaging system for correlating fluorescence cell measurements in flow, 132
CAMPBELL, JOHN C., fiber optics for a visible infrared spin-scan radiometer (VISSR), 91
CASASENT, DAVID, determinations of linear and nonlinear phase distribution, 32
COREY, H. S., microinterferometer transducer, 116
GILLAND, JERRY, Pioneer-Venus large probe infrared radiometer (LIR) optical system, 95
GROSMANN, M., setup for three-dimensional measurement on an image reconstructed by holographic process, 72
HASSIG, RALPH, Pioneer-Venus large probe infrared radiometer (LIR) optical system, 95
HAYSLETT, CHARLES R., multi-wavelength interferometric testing, 111
HERCHER, MICHAEL, virometer—an instrument for measurement of size of viruses using an optical microscope, 17
HOCHHEIMER, BERNARD F., specular illuminating arrangement for holographically stress-testing corneal wounds in post-operative patients, 8
HOPKINS, GEORGE W., the Shack interferometer, 139
HORWITZ, BRUCE A., the image detail enhancement system (IDES), 83
JACOBS, S. F., measurements of ultrasmall displacements, 39
JOHNSON, GLEN W., phase-locked interferometry, 152
KASDAN, H. L., needle points and spread functions, 124
KAY, DAVID B., imaging system for correlating fluorescence cell measurements in flow, 132
LASALLE, M., setup for three-dimensional measurement on an image reconstructed by holographic process, 72
LEE, WAI-HON, two-dimensional laser beam deflections using computer-generated holograms, 54
LEINER, DENNIS C., phase-locked interferometry, 152
LIBERMAN, I., alignment system for large high-power pulsed CO_2 laser fusion systems, 23
LOOMIS, JOHN, interactive video image digitizer—application to interferogram analysis, 143
MANNING, J. P., alignment system for large high-power pulsed CO_2 laser fusion systems, 23
MEYRUEIS, P., setup for three-dimensional measurement on an image reconstructed by holographic process, 72
MOORE, DUNCAN T., phase-locked interferometry, 152
MUNNERLYN, C. R., optical system for an automatic eye refractor, 2
PSALTIS, DEMETRI, determination of linear and nonlinear phase distributions, 32
SHACK, ROLAND V., the Shack interferometer, 139
SINGER, S., alignment system for large high-power pulsed CO_2 laser fusion systems, 23
SMITH, JACK, aspheric generation by sputtering techniques, 76
SWANTNER, WILLIAM, multi-wavelength interferometric testing, 111
SWEATT, WILLIAM C., new methods of designing holographic optical elements, 46
TAMURA, POOHSAN N., multicolor image from superposition of rainbow holograms, 59
TOORVALD, P. S., needle points and spread functions, 124
WAGNER, R. E., Fourier transform microscope, 129
WHEELESS, LEON L., imaging system for correlating fluorescence cell measurements in flow, 132
ZANONI, CARL A., dimensional gauging using a scanning laser beam, 104

SUBJECT INDEX — Volume 126

Aberration generator, Hunt, 67
Alignment system for large high-power pulsed CO_2 laser fusion systems, 23
Analysis, interactive video image digitizer—application to interferogram, 143
Aspheric generation by sputtering techniques, 76
Automatic eye refractor, an optical system for an, 2

Beam deflections using computer-generated holograms, two-dimensional laser, 54
Beam, dimensional gauging using a scanning laser, 104

CO_2 laser fusion systems, alignment system for large high-power pulsed, 23
Cell measurements in flow, imaging system for correlating fluorescence, 132
Computer-generated holograms, two-dimensional laser beam deflections using, 54
Corneal wounds in post-operative patients, a specular illuminating arrangement for holographically stress-testing, 8
Correlating fluorescence cell measurements in flow, imaging system for, 132

Deflections using computer-generated holograms, two-dimensional laser beam, 54
Designing holographic optical elements, new methods of, 46
Detail enhancement system (IDES), the image, 83
Determinations of linear and nonlinear phase distributions, 32
Digitizer—application to interferogram analysis, interactive video image, 143
Dimensional gauging using a scanning laser beam, 104
Displacements, measurements of ultrasmall, 39
Distributions, determinations of linear and nonlinear phase, 32

Elements, new methods of designing holographic optical, 46
Enhancement system (IDES), the image detail, 83
Eye refractor, an optical system for an automatic, 2

Fiber optics for a visible infrared spin-scan radiometer (VISSR), 91
Flow, imaging system for correlating fluorescence cell measurements in, 132
Fluorescence cell measurements in flow, imaging system for correlating, 132
Fourier transform microscope, 129
Functions, needle points and spread, 124
Fusion systems, alignment system for large high-power pulsed CO_2 laser, 23

Gauging using a scanning laser beam, dimensional, 104
Generation by sputtering techniques, aspheric, 76
Generator, Hunt aberration, 67

High-power pulsed CO_2 laser fusion systems, alignment system for large, 23
Holograms, multicolor image from superposition of rainbow, 59
Holograms, two-dimensional laser beam deflections using computer-generated, 54
Holographic optical elements, new methods of designing, 46
Holographic process, setup for three-dimensional measurement on an image reconstructed by, 72
Holographically stress-testing corneal wounds in post-operative patients, a specular illuminating arrangement for, 8
Hunt aberration generator, 67

IDES, the image detail enhancement system, 83
Illuminating arrangement for holographically stress-testing corneal wounds in post-operative patients, a specular, 8
Image detail enhancement system (IDES), 83
Image digitizer—application to interferogram analysis, interactive video, 143
Image reconstructed by holographic process, setup for three-dimensional measurement on an, 72
Image from superposition of rainbow holograms, multicolor, 59
Imaging system for correlating fluorescence cell measurements in flow, 132

Infrared radiometer (LIR) optical system, Pioneer-Venus large probe, 95
Infrared spin-scan radiometer (VISSR), fiber optics for a visible, 91
Instrument for measurement of size of viruses using an optical microscope, virometer—an, 17
Interactive video image digitizer—application to interferogram analysis, 143
Interferogram analysis, interactive video image digitizer—application to, 143
Interferometer, the Shack, 139
Interferometric testing, multi-wavelength, 111
Interferometry, phase-locked, 152

Large high-power pulsed CO_2 laser fusion systems, alignment system for, 23
Large probe infrared radiometer (LIR) optical system, Pioneer-Venus, 95
Laser beam deflections using computer-generated holograms, two-dimensional, 54
Laser beam, dimensional gauging using a scanning, 104
Laser fusion systems, alignment system for large high-power pulsed CO_2, 23
Linear and nonlinear phase distributions, determinations of, 32

Measurement on an image reconstructed by holographic process, setup for three-dimensional, 72
Measurement of size of viruses using an optical microscope, virometer—an instrument for the, 17
Measurements in flow, imaging system for correlating fluorescence cell, 132
Measurements of ultrasmall displacements, 39
Methods of designing holographic optical elements, new, 46
Microinterferometer transducer, 116
Microscope, Fourier transform, 129
Microscope, virometer—an instrument for measurement of size of viruses using an optical, 17
Multicolor image from superposition of rainbow holograms, 59
Multi-wavelength interferometric testing, 111

Needle points and spread functions, 124
New methods of designing holographic optical elements, 46
Nonlinear phase distributions, determinations of linear and, 32

Optical elements, new methods of designing holographic, 46
Optical microscope, virometer—an instrument for measurement of size of viruses using an, 17
Optical system for an automatic eye refractor, 2
Optical system, Pioneer-Venus large probe infrared radiometer (LIR), 95
Optics for a visible infrared spin-scan radiometer (VISSR), fiber, 91

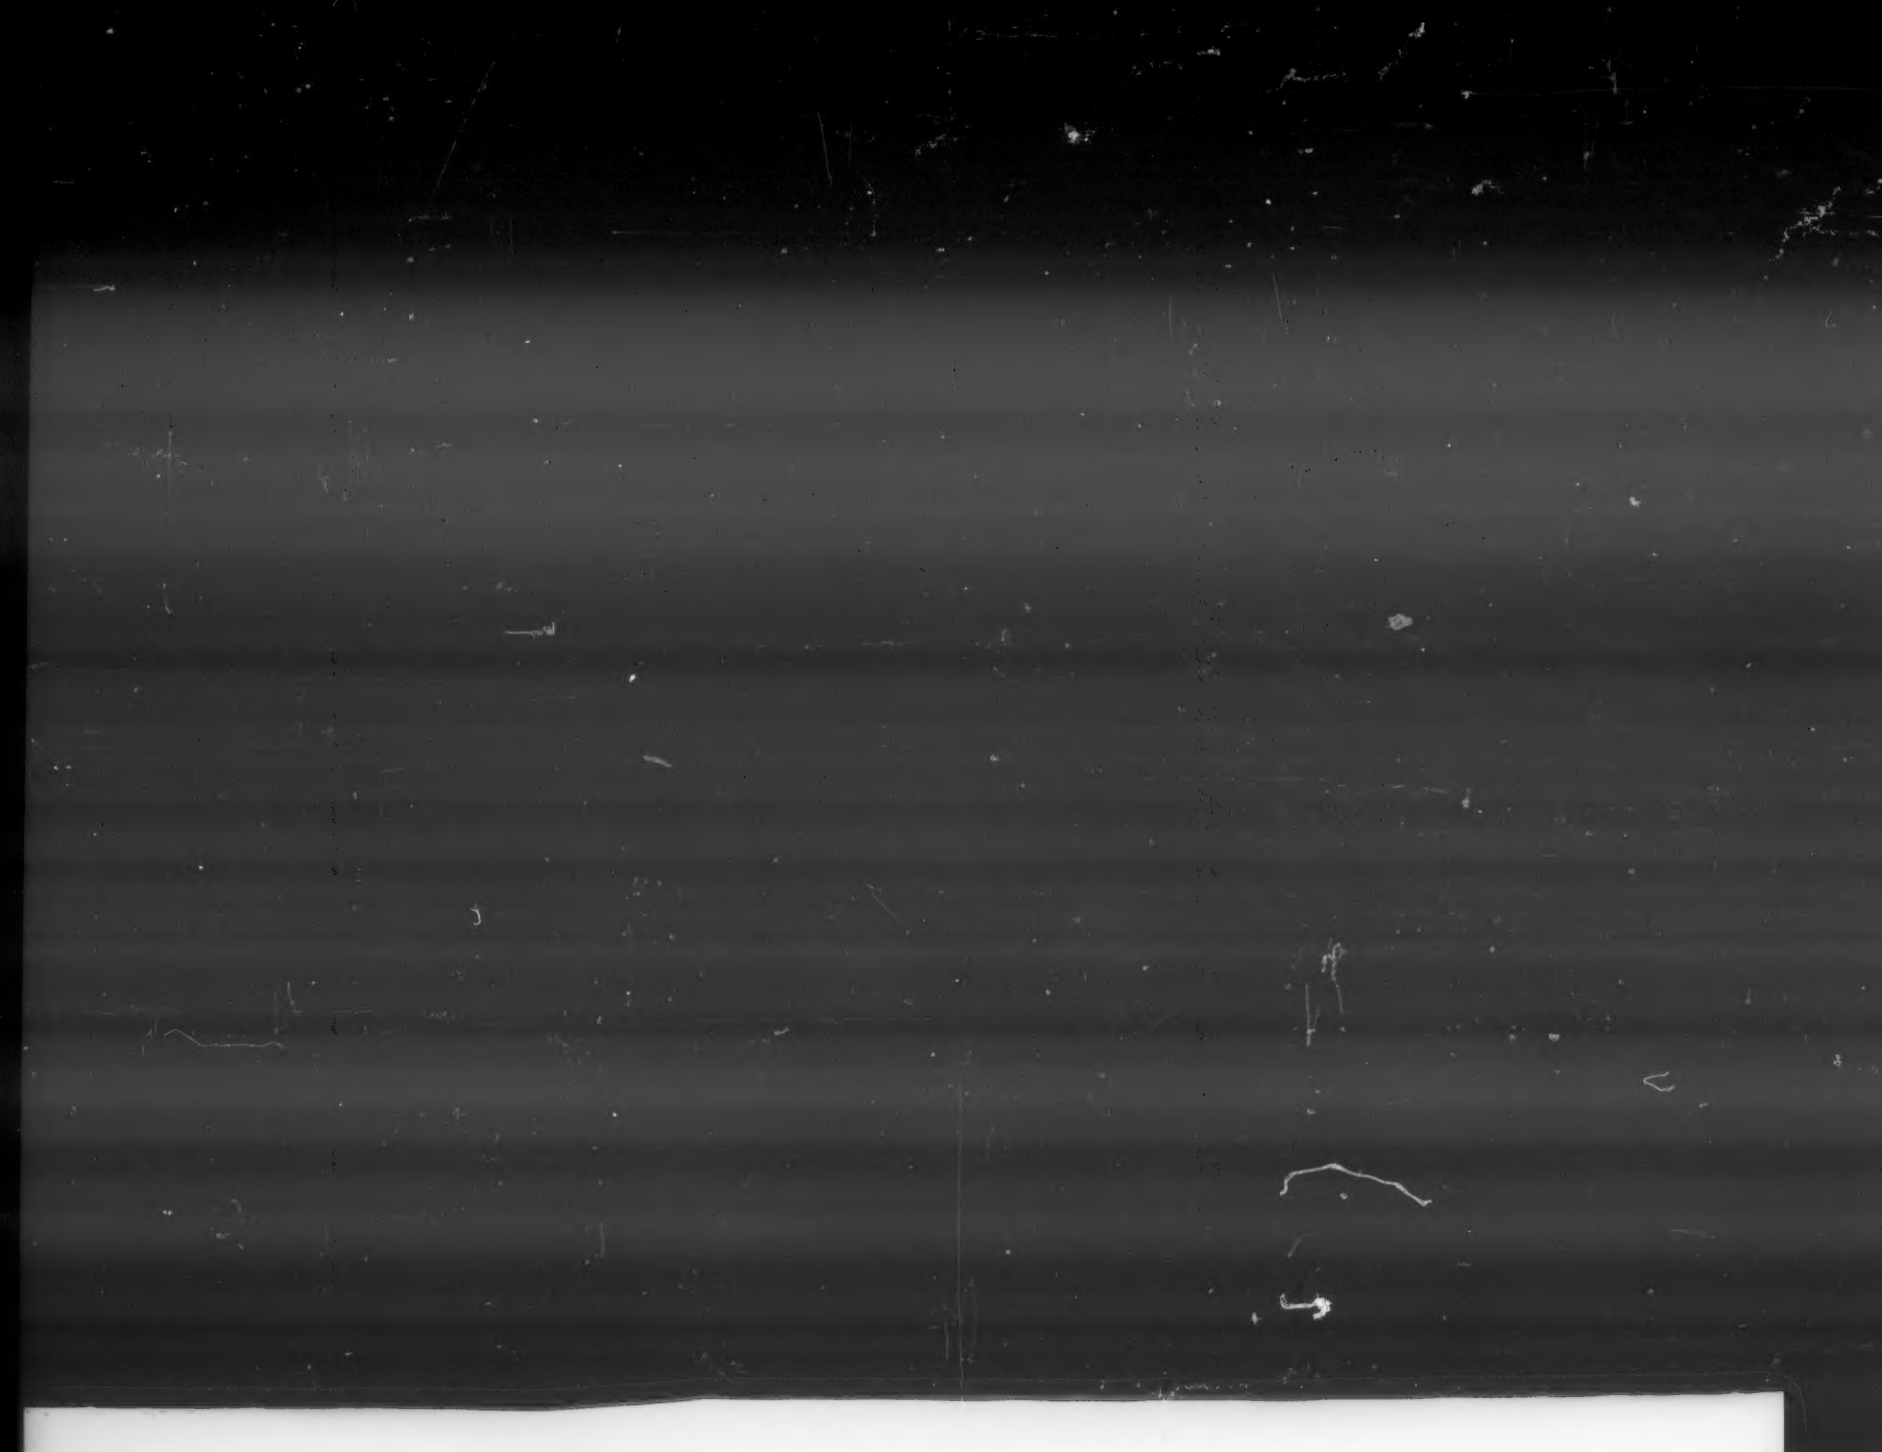
Patients, a specular illuminating arrangement for holographically stress-testing corneal wounds in post-operative, 8
Phase distributions, determinations of linear and nonlinear, 32
Phase-locked interferometry, 152
Pioneer-Venus large probe infrared radiometer (LIR) optical system, 95
Points and spread functions, needle, 124
Post-operative patients, a specular illuminating arrangement for holographically stress-testing corneal wounds in, 8
Probe infrared radiometer (LIR) optical system, Pioneer-Venus large, 95
Pulsed CO_2 laser fusion systems, alignment system for large high-power, 23

Radiometer (LIR) optical system, Pioneer-Venus large probe infrared, 95
Radiometer (VISSR), fiber optics for a visible infrared spin-scan, 91
Rainbow holograms, multicolor image from superposition of, 59
Refractor, an optical system for an automatic eye, 2

Scanning laser beam, dimensional gauging using a, 104
Setup for three-dimensional measurement on an image reconstructed by holographic process, 72
Shack interferometer, 139
Size of viruses using an optical microscope, virometer—an instrument for measurement of the, 17
Specular illuminating arrangement for holographically stress-testing corneal wounds in post-operative patients, 8
Spin-scan radiometer (VISSR), fiber optics for a visible infrared, 91
Spread functions, needle points and, 124
Sputtering techniques, aspheric generation by, 76
Stress-testing corneal wounds in post-operative patients, a specular illuminating arrangement for holographically, 8
Superposition of rainbow holograms, multicolor image from, 59
System for correlating fluorescence cell measurements in flow, imaging, 132
System (IDES), the image detail enhancement, 83
System, Pioneer-Venus large probe infrared radiometer (LIR) optical, 95
Systems, alignment system for large high-power pulsed CO_2 laser fusion, 23

Techniques, aspheric generation by sputtering, 76
Testing corneal wounds in post-operative patients, a specular illuminating arrangement for holographically stress-, 8
Testing, multi-wavelength interferometric, 111
Three-dimensional measurement on an image reconstructed by holographic process, setup for, 72
Transducer, microinterferometer, 116
Transform microscope, Fourier, 129
Two-dimensional laser beam deflections using computer-generated holograms, 54

Ultrasmall displacements, measurements of, 39

VISSR, fiber optics for a visible infrared spin-scan radiometer, 91
Video image digitizer—application to interferogram analysis, interactive, 143
Virometer—an instrument for measurement of size of viruses using an optical microscope, 17
Viruses using an optical microscope, virometer—an instrument for measurement of size of, 17
Visible infrared spin-scan radiometer (VISSR), fiber optics for a, 91


Wounds in post-operative patients, a specular illuminating arrangement for holographically stress-testing corneal, 8
